

# SUSTAINABLE CHANGES FOR THE FUTURE

03/06

SDGS FOR RESILIENT COMMUNITIES

2026

Flooding is one of the biggest problems in the Philippines. It destroys homes and puts families at risks every year. Poor drainage and climate change make the situation worse. Communities lose income, safety, and access to clean water. Disaster planning and management is often weak and unprepared. Communities need long term solutions and shared responsibilities to keep people safe. Taking action now will protect future generations from the same risks. Awareness is the first step toward resilience. Together, we can build stronger and safer communities.

## CLIMATE ACTION

VIOLET ESTRELLA

ELYZA RAMOS

Take action today and support initiatives to promote flood-resilient communities and sustainable cities. Together, we can build a safer, cleaner, and climate-ready future.

We support **SDG 6: Clean Water**, protecting water from contamination during floods. We support **SDG 11: Sustainable Cities**, making communities safer and more resilient. We support **SDG 13: Climate Action**, preparing for extreme weather and reducing disaster risks. We support **SDG 16: Strong Institutions**, promoting accountable and effective governance.

These goals guide our project and advocacy. They show that flood resilience is part of building a sustainable future.
